RAPID OPEN BITE CORRECTION (ROC)

TS^{*}₂

This innovative product has been designed by Dr. John Voudouris (University of Toronto and New York University). Open Bite are resolved in less than 4-6 months in conjunction with a light anterior box-pattern elastic. TS2 is placed palatally from upper 3-3 and/or lingually from lower 3-3 where it is totally invisible. The mildly pointed star-protrusions are comfortable reminders to efficiently prevent **Anterior Tongue Positioning**, while generous undercuts allow the use of intraoral elastics for the simultaneous crossbite correction. Completely invisible and esthetic lingual positioning that is generally comfortable.
